

engineer (non standard products)

naughtone is a furniture design, manufacture and sales business based in Yorkshire. We design most of our products in house and manufacture all of our upholstery products in our factory in Elland, West Yorkshire. All components we buy from our supply chain have been designed and developed by naughtone.

Our clients are some of the most influential brands in commerce and culture. naughtone is 11 years old and has seen significant growth year on year. naughtone has recently partnered with an American furniture manufacturer called Herman Miller who have operations, sales and manufacturing networks in almost every country.

Combined with Herman Miller naughtone has an aggressive national and International growth strategy, including manufacturing in multiple global locations. This is an exciting time to join already well respected British company.

The role:

- This role is identified as 'engineer' but would also suit an experienced designer or design engineer—the key responsibilities will be:
- Negotiating requests for adaptations or variances on standard products from the sales team and clients.
- Creating the 3D CAD parts, assemblies, drawings and any other relevant information related to the manufacture of non-standard products, working to timescales and KPJ's.
- Creating the BOM and system information of the non-standard product. Reporting during production meetings on KPJ's for non standard product procedures.
- Provide technical support, problem solving, project management and delivery for retrospective and on-site works.
- Provide support and overflow resource to the R&D and engineering department.

Who we're looking for:

- Be able to work within a team and deliver to set targets.
- Be able / show experience in good communication skills.
- Be proficient in relevant software. 2D CAD essential. Engineering based solid modelling software such as Solid-works or Inventor essential. Adobe suite preferable. Revit bonus. 3d Studio max bonus.
- Show relevant technical development and practical application experience. Working with suppliers on new development components.
- Experience from within the furniture or interior products industry preferable. Potentially even from an architectural background.
- Driving license necessary.

All applications require a recent CV. A cover letter is optional.
